## TN 2017 VAG 04 Fuel Display

Application to:

- VAG cars with Sequential gear box
- VAG cars with DSG gear box

# TECHNICAL NOTE 04\_17\_Fuel\_Display

## Fuel Display Brightness Configuration

**ADVISE:** We recommend to check the configuration of the fuel display as some conflicts have been encountered between the electronics of the display and data acquisition recording. The brightness of the display has to be adjusted to “Automatic” mode and never to the maximum.

The process to adjust the value is described here below

Note: The factory configuration is set to “Auto”.

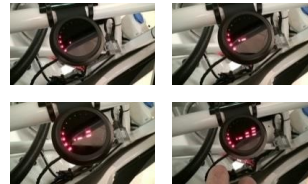

1. Turn main switch on

2. Long-tap once on the right area and release the finger for a while.

3. Long-tap again on the right area. Short-tap to change the level of brightness. Use right and left buttons – areas –

4. Set it to “Auto –it is placed before the minimum–

Once the mode has been changed just wait a few seconds to get out of configuration
